### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: The prior art of record does not provide for, nor suggests providing for automating allocations of computing resources, which each layer of the models has an associated demand and capacity attributes. Normally service models representing software only have a certain amount of demand attributes (i.e. requires x bandwidth, processing power, etc.) and does not show a layered relationship between the differing levels of software as shown in Figure 1 (processes, tasks, services, etc.). In the prior art, layers of software applications do not have a demand and capacity attributes which allow the layer to be mapped to at least two other software layers based on a function of these attributes. The user is able to tailor these optimized mappings based on a model the user wishes to utilize for these allocations. The optimization is done by a user defined optimization method such as genetic algorithms and simulated annealing as well as a function the user requests (i.e. reducing load in the network, load balancing, etc.). This is how the optimized mapping is done as shown in the disclosure Figure 5, and page 15. These, in conjunction with the other limitations of the independent claims, render this case in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
